Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1,2,4-14,16 and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Filipovic et al. (6184844).

Regarding Claims 1,2,4-14,16 and 17, Filipovic et al. show an antenna structure, method for reducing the height thereof and method for tuning the antenna, in Figures 13 and 14, for example, a flexible substrate/radome 406 with an etched multifilar, mast-type antenna 1304 or 1308 and rings 412 of conductive material, overlapping, and having open ends before rolling the substrate (Figures 23A-C), where a second substrate 406 is employed to support the top ring 412 atop the first antenna 1308. The closed loop rings 412 are permanently fixed to the antenna and are parasitically coupled thereto because they are on opposite sides of and insulated from the radiators, and they are etched on the same and a different substrate (compare to and bottom arrangements) and part of the radome that houses the antenna, and they are open ended, electrically coupled/connected to the antenna elements (see the right side of Fig. 13 and Fig. 22B). The parasitic rings 412 are connected together as shown in Fig. 22D.
